

For any two events (sets),  $E$  and  $F$  we can define:

1)  $E \cup F =$  the set containing those points that are in either  $E$  **or**  $F$  (i.e. points that are in  $E$ , or  $F$  or in both).

$E \cup F$  is called **the union** between sets  $E$  and  $F$ .

2)  $E \cap F =$  the set containing only those points that are in  $E$  **and** in  $F$ .

$E \cap F$  is called **the intersection** between sets  $E$  and  $F$ .

3)  $E^c =$  the set containing those points which are not in  $E$  (but are in the sample space  $S$ ).

$E^c$  is called **the complement** of the set  $E$ .

4)  $\emptyset$  denotes the empty set. For any event  $E$

$$E \cap \emptyset = \emptyset$$

$$E \cup \emptyset = E$$

- $[E^c]^c = E$
- $A = (A \cap B) \cup (A \cap B^c).$
- **De Morgan's First Law**

$$(\cup_{i=1}^n E_i)^c = \cap_{i=1}^n E_i^c$$

- **De Morgan's Second Law**

$$(\cap_{i=1}^n E_i)^c = \cup_{i=1}^n E_i^c$$

- **Distributive Laws**

1.

$$F \cap (\cup_{i=1}^n E_i) = \cup_{i=1}^n (F \cap E_i)$$

2.

$$F \cup (\cap_{i=1}^n E_i) = \cap_{i=1}^n (F \cup E_i)$$

## Review - New Notations

- '*E happens but F doesn't*' is denoted  $E - F$
- *Symmetrical Difference* is denoted  $E \Delta F$ .

$$E \Delta F = (E - F) \cup (F - E)$$

## Review - The Case of three events

Say there are three events:  $A, B$ , and  $C$

- Exactly one of them is true

$$(A \cap B^c \cap C^c) \cup (A^c \cap B \cap C^c) \cup (A^c \cap B^c \cap C)$$

- Exactly two are true

$$(A \cap B \cap C^c) \cup (A^c \cap B \cap C) \cup (A \cap B^c \cap C)$$

- All three are true

$$A \cap B \cap C$$

- None of them is true

$$(A \cup B \cup C)^c = A^c \cap B^c \cap C^c$$

- $P(E \cup F) = P(E) + P(F) - P(E \cap F)$

- Generalization:

$$\begin{aligned}
 P(\cup_{i=1}^n E_i) &= \sum_{i=1}^n P(E_i) - \sum_{i_1 < i_2} P(E_{i_1} \cap E_{i_2}) \\
 &\quad + \sum_{i_1 < i_2 < i_3} P(E_{i_1} \cap E_{i_2} \cap E_{i_3}) + \dots \\
 &\quad \dots (-1)^{r+1} \sum_{i_1 < i_2 < \dots < i_r} P(E_{i_1} \cap E_{i_2} \cap \dots \cap E_{i_r}) + \dots \\
 &\quad \dots (-1)^{n+1} P(E_1 \cap \dots \cap E_n)
 \end{aligned}$$

Example:

$$\begin{aligned}
 P(E_1 \cup E_2 \cup E_3 \cup E_4) &= P(E_1) + P(E_2) + P(E_3) + P(E_4) - \\
 &\quad - P(E_1 \cap E_2) - P(E_1 \cap E_3) - P(E_1 \cap E_4) - \\
 &\quad - P(E_2 \cap E_3) - P(E_2 \cap E_4) - P(E_3 \cap E_4) + \\
 &\quad + P(E_1 \cap E_2 \cap E_3) + P(E_1 \cap E_2 \cap E_4) + \\
 &\quad + P(E_1 \cap E_3 \cap E_4) + P(E_2 \cap E_3 \cap E_4) - \\
 &\quad - P(E_1 \cap E_2 \cap E_3 \cap E_4)
 \end{aligned}$$
