Sets¹ STA 256: Fall 2019

 $^{^1\}mathrm{This}$ slide show is an open-source document. See last slide for copyright information.

A statistical experiment is a procedure whose outcome is not known in advance with certainty.

Sample Space: set of outcomes $s \in S$

- Sell 500 lottery tickets, pick the winning number. $S = \{1, 2, \dots, 500\}$
- Hold your breath as long as you can.
 - $S = \{t : t \ge 0\}$
- Pick coin or die from jar, roll or toss. $S = \{H, T, 1, 2, 3, 4, 5, 6\}$

Event: Set of outcomes, $A \subset S$

- $A \cap B = \{s \in S : s \in A \text{ and } s \in B\}$
- $A \cup B = \{s \in S : s \in A \text{ or } s \in B\}$
- $\bullet \ A^c = \{s \in S: s \notin A\}$
- $\bullet \ A \cap B^c = \{s \in S : s \in A \text{ and } s \notin B\}$

- A and B are said to be $\mathit{disjoint}$ if $A \cap B = \emptyset$
- The idea is that A and B have no elements in common; they do not overlap.

- However, recall that the null set is a subset of every set: $\emptyset \subseteq A$.
- So $\emptyset \cap A = \emptyset$.
- And the null set is also disjoint from every set.

- Commutative: $A \cup B = B \cup A, A \cap B = B \cap A$
- Associative
 - $(A \cup B) \cup C = A \cup (B \cup C),$
 - $(A \cap B) \cap C = A \cap (B \cap C)$
- Distributive (like multiplication)
 - $A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$
 - $A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$

- $(A \cap B)^c = A^c \cup B^c$
- $\bullet \ (A\cup B)^c = A^c \cap B^c$
- \bullet Rule: complement and flip $\cup \cap$

Extend the notation to larger number of sets Not in the text

Distributive laws

•
$$A \cap \left(\bigcup_{j=1}^{n} B_{j} \right) = \bigcup_{j=1}^{n} (A \cap B_{j})$$
, or even
• $A \cap \left(\bigcup_{j=1}^{\infty} B_{j} \right) = \bigcup_{j=1}^{\infty} (A \cap B_{j})$
and

•
$$A \cup \left(\bigcap_{j=1}^{n} B_{j} \right) = \bigcap_{j=1}^{n} (A \cup B_{j})$$

• $A \cup \left(\bigcap_{j=1}^{\infty} B_{j} \right) = \bigcap_{j=1}^{\infty} (A \cup B_{j})$

De Morgan Laws (complement and flip)

•
$$(\cap_{j=1}^{\infty} A_j)^c = \bigcup_{j=1}^{\infty} A_j^c$$

• $(\bigcup_{j=1}^{\infty} A_j)^c = \cap_{j=1}^{\infty} A_j^c$

WARNING!

- Addition and subtraction apply only to numbers. They are not set operations.
- For example, if A and B are sets, then A + B is not defined.
- A + B is not the same as $A \cup B$.
- Because what is A + A A?
- Some very bad probability proofs use addition and subtraction of sets.
- Such proofs will receive a zero.
